                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
        Sequence 17249, Application US/09252991A

Sequence 17249, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR PILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 17249

LENGTH: 160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 13
US-08-789-329C-10
Sequence 10, Application US/08789329C

                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 139, Application US/10188832

Sequence 139, Application No. US20040076955A1

GENERAL INFORMATION:
APPLICANT: Mack, David H.
APPLICANT: Aiz, Matasha
APPLICANT: Bos Biotechnology, Inc.
TITLE OF INVENTION: Methods of Diagnosis of Bladder Cencer, Compositions
TITLE OF INVENTION: Methods of Screening for Modulators of Bladder
TITLE OF INVENTION: Cancer
TITLE OF INVENTION: Cancer
TITLE OF INVENTION: Cancer
FILE REFERENCE: 018501-002330US
CURRENT APPLICATION NUMBER: US 60/302,814

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Cancer antigen NY ESO1/CAG-3. WPI; 1999-277270/23.

Example 11; Page 50; 88pp; English.

This peptide corresponds to amino acid residues 51-62 of human NY ESO-1/CAG-3 ORF1 (see AAY05965), a new and potent tumour antigen that is capable of eliciting an antigen specific immune response by T cells. Cancer peptides (see AAY05967-87) derived from CAG-3, portions of CAG-3 and their variants, are useful as cancer vaccines. A claimed method of preventing or inhibiting cancer involves administering a cancer peptide, with or without an HIA molecule. The cancer peptides form part of, or are derived from, cancers such as primary or metastatic melanoma, thymoma, lymphoma, sarcoma, lung cancer, liver cancer, leukaemia, uterine cancer,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This peptide corresponds to amino acid residues 50-62 of human NY ESO-1/CAG-3 ORPI (see AAVC9565), a new and potent tumour antigen that is capable of eliciting an antigen specific immune response by T cells. Cancer peptides (see AAVC9567-87) derived from CAG-3, portions of CAG-3 and their variants, are useful as cancer vaccines. A claimed method of preventing or inhibiting cancer involves administering a cancer peptide, with or without an HIA molecule. The cancer peptides form part of, or are lymphoma, sarcoqua, lung cancer, liver cancer peptides form cancer, lymphoma, usering, lunger cancer, kidney cancer, and adenocarcinomas such as breast, prostate, ovarian, pancreatic and thyroid cancers
cervical cancer, bladder cancer, kidney cancer and adenocarcinomas such as breast, prostate, ovarian, pancreatic and thyroid cancers

The present sequence represents a cancer peptide that corresponds to amino acid residues 49-62 of human ESO-1/CAG-3 (or CAG-3) ORF1 (see AAY05965), a new and potent tumour antigen capable of eliciting an antigen specific immune response by T cells. Cancer peptides derived from CaG-3 ORF1, CAG-3 ORF2 (see AAY05966), portions of them and their CC variants (see AAY05967-87), are useful as cancer vaccines that protect against cancer. The invention provides: vectors and host cells (also useful as vaccines); a method of diagnosis of cancer or precancer; a cranspanic animal; antisense oligonucleotides that inhibit expression of the cancer peptide or tumour antigen; antibodies reacting with a CAG-3 cancer peptide or tumour antigen; antibodies reacting with a CAG-3 cancer peptide or inhibiting cancer by administering a cancer peptide. With or without an HIAA molecule. The cancer peptides form part of, or are derived from, cancers such as primary or metastatic melanoma, thymoma, corrorma, lung cancer, liver cancer, leukaemia, uterine cancer, cervical cancer, bladder cancer, liver cancer and adenocarcinomas such as breast, prostate, ovarian, pancreatic and thyroid cancers. Melanoma is return to a patient

The present sequence represents a cancer peptide that is based on amino acid residues 44-62 of human ESO-1/CMG-3 (or CMG-3) ORF1 (see AAY05965), and wand potent tumour antigen capable of eliciting an antigen specific immune response by T cells. Cancer peptides derived from CAG-3 ORF1, CAG-3 ORF2 (see AAY05966), portions of them and their variants (see AAY05967-CC 3) ORF2 (see AAY05966), portions of them and their variants (see AAY05967-CC 3) ORF2 (see AAY05966), portions of the cancer rank protect against cancer. The invention provides: vectors and host cells (also useful as vaccines); a method of diagnosis of cancer or precancer; a transgenic animal; antibodies reacting with a CAG-3 cancer peptide or tumour antigen; antibodies reacting with a CAG-3 cancer peptide or tumour antigen; antibodies reacting with a CAG-3 cancer peptide. The cancer bedtides form part of, or are derived from, cancers such as primary or metastatic melanoma, thymoma, lymphoma, sarcoma, lung cancer, liver cancer, leukaemia, uterine cancer, cerrical cancers blander cancer, liver cancer, leukaemia, uterine cancer, cerrical cancer, bladder cancer, kidney cancer and adenocarcinomas such as breast, prostate, ovarian, pancreatic and thyroid cancers. Melanoma is treated by inducing cancer specific T cells in vitro for subsequent return to a
                                                                                                                                                                                                uterine cancer; breast cancer; prostate cancer; ovarian cancer; cervical cancer; bladder cancer; kidney cancer; pancreatic cancer; liver cancer; sarcoma; tumour; diagnosis; immunotherapy; therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    数ななはは間
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a cancer peptide that corresponds to amino acid residues 48-62 of human ESO-1/CAG-3 (or CAG-3) ORF1 (see AAV05965), a new and potent tumour antigen capable of eliciting an antigen specific immune response by T cells. Cancer peptides derived from CAG-3 ORF2 (see AAV05966), portions of them and their cancer recines that protect against cancer. The invention provides vectors and host cells (also useful as vaccines); a method of diagnosis of cancer or precancer; a cransgenic animal; antisense oligonucleotides that inhibit expression of the cancer peptide or tumour antigen, antibodies reacting with a CAG-3 cancer peptide or tumour antigen, antibodies reacting with a CAG-3 cancer peptide or inhibiting cancer peptides form part of, or are derived from, cancers such as primary or metastatic melanoma, thymoma, with or without an HLA molecule. The cancer peptides form part of, or are derived from, cancers such as primary or metastatic melanoma, thymoma, carvoma, lung cancer, liver cancer, leukaemia, uterine cancer, cervical cancer, bladder cancer, liver cancer, leukaemia, uterine cancer, cervical cancer, bladder cancer, leukaemia, particula cancer, bladaloma is traated by inducing cancer-specific T cells in vitro for subsequent

RESULT 5 AAY05979 Epitope liberation-related NY-ESO-1 protein SeqID11.

```
The invention rélates to a new synthetic polypeptide (I) comprising several different relationship relative to their linked coerner relative to their linked in the parent polypeptide to impede, abrogate or otherwise alter at least one parent polypeptide to impede, abrogate or otherwise alter at least one function associated with the parent polypeptide and for inducing an immune response against a pathogen or cancer. Also included are a synthetic polypeptides. The synthetic polypeptides and polymelocides or saynthetic polypeptides. The synthetic polypeptides and polymelocides or a savine. The synthetic polypeptide is useful for modulating immune responses preferably directed against a pathogen or a cancer, (e.g., cancers of the lung, breat, ovary, cervix, colon, head and neck, pancreas, prostate, stomach, bladder, kidney, bone liver, osesophagus, brain, testicle, uterus), as potentiating agents.

Compositions comprising the polypeptide may be used in the treatment or prophylaxis against viral (such as infections caused by HVV (human immune immunodeficiency virus), hepatitis, influenza, Japanese encephalitis virus, Epstein-Barr virus and respiratory syncytial virus), bacterial (e.g., infections caused by Neisseria, Meningococcal, Haemophilus, Ce almonatia, streptococcal, Legionella and Mycobacterium or paraaitic (e.g., infections caused by plasmodium, Schistosoma, Leishmania, Trypanosoma, Toxoplasma and Giardia) infections. The present sequence is a peptide derived from a parent protein used to construct a savine of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New synthetic polypeptides having several different segments of at least one parent polypeptide linked together differently compared to the linkage in the parent polypeptide, for inducing immune response against a

This invention relates to a novel method of identifying a polypeptide suitable for epitope liberation, including the steps of identifying an epitope of interest; providing substrate polypeptide sequence including the epitope, wherein the substrate polypeptide sequence including the epitope, wherein the substrate processing by a proteasome, contacting the substrate with a composition including the proteasome, and assaying for liberation of epitope. The invention may be useful for the development of compounds with a cytostatic, antibacterial, proteasoide or fungicide activity acting as T-cell activators. In addition, the invention may allow development of a vaccine. The invention is useful for identifying a polypeptide suitable for epitope liberation, where the epitope is a housekeeping epitope. The compositions comprising the identified housekeeping epitope. The compositions comprising the identified housekeeping epitopes are useful in vitro in vaccine (CTL) to be used in adoptive immunotherapy. The invention is also useful cor the knowledge that such epitopes are, in fact, produced by the virus, bacterium, protozoan or fungus. CTL epitopes are identified based on the knowledge that such epitopes are, in fact, produced by the housekeeping proteasome system. Once identified, these epitopes, embodied as peptides, can be used to successfully immunise or induce therapeutic cor the host. The present sequence is that of a protein which is related to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

Human NY-ESO-1 protein sequence,

(first entry)

27-0CT-1998

```
of onset of a cancerous condition, comprising monitoring a sample from a patient with the cancerous condition for a parameter selected from NY-ESO-1 protein, a peptide derived from NY-ESO-1 protein and cytolytic T cells specific for the peptide and an MHC molecule with which it non-covalently complexes. Methods for the treatment of a cancerous condition are also described. The NY-ESO-1 protein and peptides derived from it can be used for diagnosis and treatment of cancers and to monitor the efficacy of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated cancer associated antigen - is used to develop products for the diagnosis and treatment of cancers and for monitoring cancer therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a cancer associated antigen. The clone from which the DNA sequence is obtained is designated NY-ESO-1. The specification described a method for determining regression, progression

The present sequence represents human NY-ESO-1, formerly known as LL-1.2 clone, which is used in an example from the present invention which describes LAGE-1 tumour associated protein (TAP). The present invention also describes: (1) a method for treating a subject with a disorder characterised by expression of a LAGE-1 nucleic acid molecule or an expression product, comprising administering to the subject autologous cytolytic T cells to ameliorate the disorder, where the cytolytic T cells are specific for complexes of an HLA molecule and a LAGE-1 TAP or an imunogenic fragment; (2) a method for treating a subject with a disorder characterised by expression of a LAGE-1 nucleic acid molecule or an expression product, comprising administering a LAGE-1 TAP or an imunogenic fragment to ameliorate the disorder; and (3) a method for selectively enriching a population of T cells with cytolytic T cells opecific for a LAGE-1 TAP comprising contexting an isolated population of T cells with an agent presenting a complex of a LAGE TAP or an expression prosecting a lagent presenting a complex of a LAGE TAP or an expectively enriching a population of T cells with a lagent presenting a complex of a LAGE TAP or an expective to the subject of the lagent presenting a complex of a LAGE TAP or an expective to the lagent presenting a complex of a LAGE TAP or an expective to the lagent presenting a complex of a LAGE TAP or an expective to the lagent presenting a complex of a LAGE TAP or an expective to the lagent presenting a complex of a LAGE TAP or an expective to the lagent presenting a complex of a LAGE TAP or an expective to the lagent presenting a complex of a LAGE TAP or an expective to the lagent presenting a complex of a LAGE TAP or an expective to the lagent presenting a complex of a LAGE TAP or an expective to the lagent presenting a complex of a LAGE TAP or an expective to the lagent presenting a complex of a LAGE TAP or an expective to the lagent presenting a complex of a LAGE TAP or an expective to the lagent presenting 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          enrich
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            methods and products from the present invention can be used for the diagnosis and treatment of LAGE-1 associated disorders, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunogenic fragment and a HLA presenting molecule to selectively the isolated population of T cells with the cytolytic T cells.                                                                                                                                                                                                                                                                                                                                                                                                  Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                       Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                              Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptide
                                                                   Peptide
                                                                                                                                                                                     Peptide
                                                                                                                                                                                                                                                                                           Peptide
The present sequence represents the ORF1 protein encoded by open reading frame 1 of the human ESO-1/CAG-3 (or CAG-3) gene. CAG-3 is a new and content tumour antigen capable of eliciting an antigen specific immune response by T cells. Cancer peptides comprising ORF1, ORF2 (see AAY05966), portfons of these peptides comprising ORF1, ORF2 (see CAY05966), portfons of these peptides and their variants (see AAY05965-CC AAY05966), portfons of these peptides and their variants (see AAY05965-CC AAY05966), portfons of these peptides that intent from development of cancer. The invention provides: vectors and host cells a transgenic animal; antisense oligonucleotides that inhibit expression of the cancer peptide, useful in diagnostic and detection assays; and methods of tor preventing or inhibiting ancer by administering a cancer peptide, with or without an HLA molecule. The cancer peptides form part of, or are derived from, cancers such as primary or metastatic melanoma, thymoma, concerned, protected to metastatic melanoma, thymoma, conversing the cancer, liver cancer, leukaemia, uterine cancer, cervical cancer, bladder cancer, leukaemia, uterine cancer, cervical cancer, broaten, pancreatic and thyroid cancers. Melanoma is transfer or period. The cancer peptide in vitro for subsequent

Peptide Peptide

```
the CAMEL (Cytotoxic T lymphocyfes (CTL) recognised Antigen on MELanoma) protein, a tumour-asociated antigen. The tumour-associated antigen displayed on melanoma cells is recognised by cytotoxic T lymphocytes. This sequence has anticancer activity. CAMEL tumour antigen and immunogentc peptides derived from it are useful for cancer immunotherapy. They have the potential to induce an immune response, by eliciting a CTL response. The DNA molecule is used for the construction of recombinant or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is the human NY-ESO-1 protein, a tumour antigen, identified by screening an esophagus carcinoma cDNA library. This protein is derived from open reading frame (ORF) -1 that contain epicopes of tumour specific T-cells. NY-ESO-1 is expressed in different tumour types, but not in healthy tissues except in testis. It also shows homology with
                                                                                                                                                                                                                                                                                                                                                                                                                                      Tumor-associated antigen useful for cancer immunotherapy is encoded by the open reading frame of LAGE-1 (a tumor-specific antigen) cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            carcinoma; melanoma; ovary; testis; transmembrane domain;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a human tumour antigen, NY-ESO-1, the cDNA encoding which was isolated from an oesophagus squamous cell cancer CDNA library. Tissue, localisation studies revealed it to be expressed at high levels in normal ovary and testis but not in normal colon, kidney, liver, brain, oesophagus and skin. It was expressed in certain tumours and tumour cell lines with some degree of frequency - these included melanoma specimens and cell lines, and breast and bladder cancer specimens, with expression in other tumour types being sporadic. Peptides derived from NY -ESO-1 are bound by both MHC (major histocompatibility complex) Class I and Class I HIA-A2 molecules, thereby stimulating color of cytocoxic T-cells, while peptides AAYS2435-YS2440 bind to Class II HIA-DESO-1 may be used in methods and color the treatment, diagnosit and prevention of cancers compositions used for the treatment, diagnosis and prevention of cancers compositions used for the treatment, diagnosis and prevention of cancers compositions used for the treatment, diagnosis and prevention of cancer lund as melanoma. Dreast cancer lund cancer lund cancer lund selectives and cancer lund cancer lund selectives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (such as melanoma, breast cancer, prostate cancer, lung cancer, hepatoma, ovarian cancer, thyroid cancer, bladder cancer, or lymphoma) and to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NY-ESO-1; CAMEL; CTL-recognised Antigen on MELanoma; human; cancer; CTL; cytotoxic T lymphocyte; tumour-associated antigen; LAGE-1; anticancer; melanoma; immunotherapy; immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Revised record issued on 21-OCT-2004 : Correction to feature table key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel peptides which bind to MHC class I and MHC class II molecules, useful for therapeutic and diagnostic purposes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents a human oesophageal cancer-associated antigen, NY-ESO-1. The CDNA encoding this sequence was isolated from a CDNA ilbrary propared from a specimen of well-to-moderately differentiated squamous cell cancer of the oesophagus. Expression analysis demonstrated that NY-ESO-1 was expressed in oesophagus. Expression analysis demonstrated that NY-ESO-1 was expressed in oesophageal carcinoma, certain melanoma cell lines and in normal ovary and testis tissue, but not in normal colon, kidney, liver or brain tissue. Analysis of the amino acid sequence of the protein indicates that the protein has a transmembrane domain, several N-myristoylation sites and O-phosphorylation sites and that it contains antigenic sequences in the N-terminal half of the protein. The antigenic sequences in the N-terminal half of the protein. The antigenic sequences in the N-terminal half of the protein. The antigenic and post- translationally modified forms, and may be used to generate anti-NY-ESO-1 antibodies. It can also be used as a diagnostic marker for oesophageal cancer, and can be utilised as a marker for the targetted delivery of therapeutic agents to oesophageal cancer.

Can also be used to generate diagnostic or therapeutic agents

It is provided in a specification relating to a method for determining the status of a ancerous condition in a patient with a tumour that expresses NY-ESO-1. The method comprises assaying a sample taken from the patient for antibodies that specifically bind to the NY-ESO-1 and comparing the value obtained from assay of a prior sample taken from the patient. Any difference between the values is indicative of a change in status of the cancerous condition. The method is useful for determining whether a cancerous condition is progressing or remaining stable, in particular in patients receiving treatment for a melanoma, adenocarcinoma, non-small cell lung carcinoma or bladder
Method useful for determining the status (e.g. progression, regression or stability of the disease) of a cancerous condition, involves determining the levels of NY-ESO-1 specific antibodies in a sample taken from a

XX

Genomic sequences of tumor associated antigen EY-ESO-1 (LAGE-2) useful for diagnosing testicular tumors.

YX

XX

Genomic sequence represents cancer testis tumour antigen NY-ESO-1

CC dlso called LAGE-2). NY-ESO-1 is a molecule that is processed to at class I and class II and/or historocompatibility complex (WHC). NY-ESO-1 is expressed in tumour mRNA and in testis, but not normal colon, kidney, cc class I and class II and/or historocompatibility complex (WHC). NY-ESO-1 is expressed in tumour mRNA and in testis, but not normal colon, kidney, cc liver or brain tissue. The presence or level of expression of NY-ESO-1

XX

CC may be assayed for the diagnosis of cancer, especially testis tumours XX

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A breast and melanoma-shared tumor antigen: T cell responses to antigenic peptides translated from different open reading frames.";
J. Immunol. 161:3596-3606(1998).
-!- TISSUE SPECIFICITY: Expressed in testis and ovary and in a wide variety of cancers. Detected in utcrine myometrium.
-!- SIMILARITY: Belongs to the CTAG family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  10-MAY-2005 (TrEMBLrel. 30, Created)
